KGOTSOFALANG MAGANYA

Intermediate Software Developer | C# | .NET | SQL Server | Agile

Email: Kg.obedience@gmail.com | **Phone:** +27 67 197 5848 | **Location:** Johannesburg, Gauteng, South Africa

Portfolio: https://kgotso-hub.github.io/ | **LinkedIn: https://www.linkedin.com/in/kgotsofalang-maganya-502223a4/**

PROFESSIONAL SUMMARY

Intermediate Software Developer with 5+ years of professional C# experience designing, building and maintaining enterprise systems within Agile/Scrum teams. Strong foundation in object-oriented design, the .NET ecosystem and SQL Server, with a track record of refactoring legacy code, modernising Windows Forms applications into web architectures, and diagnosing complex production issues under time pressure. Comfortable owning features across the full SDLC, from requirements and estimation through to deployment and support. A fast learner who picks up new domains and technologies quickly, welcomes feedback, and is eager to grow into more technically demanding areas of software engineering.

CORE TECHNICAL SKILLS

Daily use (current role): C# | SQL Server & T-SQL (incl. query optimisation) | JavaScript | jQuery | HTML5 | CSS3 | .NET / ASP.NET Web Forms

Software Design: Object-Oriented Programming | SOLID Principles | Design Patterns | Data Structures & Algorithms | Performance Optimisation

Methodologies: Agile / Scrum | Full SDLC | Code Review | Debugging & Troubleshooting | System Modernisation

Tools: Visual Studio | VS Code | Git | Bitbucket | IIS | JIRA

Previous role, hands-on (not in current daily use): Automated testing: Selenium WebDriver, Test Project, Unit Testing | API integration support: maintained and troubleshot a HubSpot CRM-linked web app, using Postman | VB.NET | Crystal Reports

Introductory training only (no production experience): React | TypeScript – completed a short training course at Singular Systems

WORK EXPERIENCE

Intermediate Programmer

Easy Clear (Pty) Ltd — Johannesburg *Aug 2023 – Present*

- Designed and delivered new production features across a multi-module enterprise clearing and invoicing platform, including automated document generation and email workflows that reduced manual processing for end users.
- Built audit and activity-tracking views to improve traceability and troubleshooting across core business workflows, using C# and ASP.NET.
- Implemented filtered search and Excel export functionality, streamlining data extraction and reporting for business users.
- Led the migration of Windows Forms modules to a modern ASP.NET web architecture, redesigning legacy components for better accessibility and long-term maintainability.
- Refactored legacy code and analysed and optimised slow T-SQL queries, improving performance and reducing technical debt across production systems.

Programmer

Singular Systems — Johannesburg *Oct 2022 – Jul 2023*

- Owned end-to-end feature development for internal enterprise systems in C# and SQL Server, from requirements and estimation through to deployment.
- Served as primary developer on the maintenance of an international client application (KYA) integrated with HubSpot CRM: investigated errors and failed API payloads, diagnosed root causes and fed findings back to stakeholders.
- Participated in Agile planning sessions, estimating effort and aligning delivery timelines with stakeholders.

Junior Programmer

Singular Systems — Johannesburg *Mar 2022 – Oct 2022*

- Handled day-to-day maintenance of production systems, investigating and resolving defects under time pressure to keep systems stable.

- Mentored and trained interns, fostering knowledge-sharing and team capability growth.
- Improved code efficiency through refactoring, reducing technical debt and enhancing application performance.
- Completed a short React and TypeScript training course offered by the company.
- Authored automated test scripts using Selenium WebDriver to support regression testing cycles.

Trainee Programmer

Singular Systems — Johannesburg *Mar 2021 – Mar 2022*

- Maintained the Share Trust System, a critical financial platform used by major South African organisations.
- Contributed feature development and SQL query optimisation to the KUE project, improving data retrieval performance.
- Created installation packages for Windows desktop applications, streamlining client deployment processes.

Intern — Systems Developer

Singular Systems — Johannesburg *Mar 2020 – Mar 2021*

- Designed and built a full-stack internal Tuck-Shop web application featuring online ordering, digital wallet, and payment functionality using C#, SQL, HTML, CSS, and JavaScript.
- Introduced to automated testing frameworks including Selenium WebDriver and Test Project.
- Gained exposure to live client deliverables during the later stages of the internship programme.

EDUCATION

National Diploma: Information Technology – Software Development

Nelson Mandela University *Feb 2017 – Dec 2019*

Port Elizabeth (Gqeberha), South Africa · National Qualification Framework (NQF) Level 6

PROFESSIONAL DEVELOPMENT

• Continuous learning through hands-on project delivery, code reviews, and Agile team participation.
